

Bismuth Oxychloride

FACT SHEET

Description: Very fine crystals composed of bismuth (naturally occurring metallic element) & salt. Fine white crystalline powder, no odor. Insoluble in water, but miscible in liquids as oils. CAS# 7787-59-9.

INCI Name: Bismuth oxychloride.

Properties: Pearlescent pigment providing excellent whiteness, lustre & brightness, good filling properties providing smooth texture.

Use: Add as is to formulas, can be blended with other pigments.

Applications: Main ingredient for mineral makeup products including face powders, foundations, lipsticks, eye shadows, mascara, and more.
