Method

Give hot distilled water and EDTA into a clean and disinfected glass beaker, sprinkle xanthan gum into it and stir with high speed. Add phase B to phase A and stir. Prepare phase C in a separate, heat resistant glass beaker and heat to 150oF/66oC. Stir well until the mixture is homogenous. Heat up also phase A/B to (maximum 150oF/66oC). Remove the two phases from the heat and add phase C to phase A/B. Mix thoroughly and cool it down to 100oF/40oC. Finally, add phase D and stir again.

Properties

This sunscreen lotion provides UVA and UVB protection, the amount of micronized titanium dioxide can be increased to get an even higher UV protection. Please check our sunscreen chart.
