#### Method

Add phase A into a disinfected, heat-resistant glass beaker and heat to 150oF/66oC. Heat phase B in a separate beaker to the same temperature, stir occasionally. Add phase B to phase A and mix well until the emulsions becomes thicker. Continue to stir. After the temperature has dropped below 100oF/38oC add phase C one by one while stirring well after each ingredient. The cream can be filled into jars.

#### Properties

Light cream that highly protects the skin's collagen from degradation and restores dermal tissue. The cream also greatly moisturizes and regenerates the skin due to lacto-ceramide and jojoba protein. An ideal treatment for the 30+ skin for mid and long term anti-aging care.
