Method

Give phase A into a disinfected glass beaker, sprinkle the hyaluronic acid into the distilled water while mixing well with our little hand mixer to avoid the formation of lumps. Add phase B into another disinfected glass beaker and stir. Add phase B to phase A and stir very well until the gel is homogenous and thick. Add Phase C to phase A/B and stir well. If necessary adjust viscosity with GelMaker EMU (shade well before use). The gel can be filled in treatment pumps, jars or tubes.

Properties

Light gel that provides potent collagen protection and has strong moisturizing properties due to hyaluronic acid. SkinTight (algae extract) firms the skin around the eyes.
