**Method**

Add phase A into a disinfected glass beaker and heat to 170F/76C to melt the ingredients. When melted add phase B to phase A and stir. Add phase C to a mortar and mill well with pestle, remove all paste from mortar (using a rubber spoon works best) and add to phase A/B, stir well until homogeneous. Remove from the heat and pour into a compact case, small pots or into a stick container, let it cool.

**Properties**

Solid foundation with an extremely velvet feel, spreads well on skin, gives soft coverage and looks very natural.
