**Procedure**

Give phase A into a disinfected glass beaker and stir until the EDTA is dissolved. Give phase B into another disinfected glass beaker and stir. Add phase B to phase A and stir until it becomes a homogenous thick gel. Add phase C one by one and stir again well. Viscosity can be adjusted by adding more GelMaker EMU (shake well before using). The gel is best filled into a treatment pump, tube or jar.

**Properties**

Intensive skin treatment with Coenzyme Q-10, lacto-ceramide and wheat protein. Apply the Gel once or twice daily for an effective anti-aging, anti-wrinkle and regenerating treatment.
