**Method**

Give phase A into a disinfected, heat-resistant glass jar and heat slowly to (150°F/66°C) to melt the ingredients, stir. Give phase B into a separate jar and heat it to the same temperature. Add phase A to phase B and stir until it is a homogeneous solution. Cool to 100°F/38°C add phase C and stir again. The viscosity can further be adjusted with GelMaker EMU.

**Properties**

Almond oil and cetyl alcohol will soften your skin while walnut powder exfoliates. Apply to dampen skin and gentle massage, then rinse off.
