Method

Give phase A into a disinfected glass beaker and sprinkle the hyaluronic acid into the distilled water while mixing at the same time with a little hand mixer to avoid the formation of lumps. Add phase B into another disinfected glass beaker and stir to blend the ingredients. Add phase B to phase A and stir very well until the gel is homogenous. Add the ingredients of C to phase A/B and stir well. The gel can be filled into treatment pumps, jars or into tubes. Viscosity can further be adjusted with GelMaker EMU, stir well.

Properties

Light gel that boosts collagen protection and has potent moisturizing properties due to hyaluronic acid and tripeptide-5. Skintight AP and Tripeptide-5 also firm the skin and strongly reduce wrinkles. Watermelon Extract protects the skin cells against daily stress induced by UV light and free radicals. A powerful treatment.
