Method

Add phase A into a disinfected, heat-resistant glass beaker and stir until the urea is dissolved. Add phase B to another glass beaker. Heat both beakers to 160oF/71oC. Add phase B to phase A and stir well until creamy. Remove from the heat. Meanwhile sprinkle the hyaluronic acid in phase C into the distilled water in phase C and stir with a small hand mixer to avoid the formation of lumps. Then add to phase A/B and mix well. Add the remaining ingredients of phase C to the cream and stir after each ingredient.

Properties

Pleasant cream with powerful moisturizing ingredients such as the hyaluronic acid, urea and meadowfoam seed oil with sheabutter. The cream protects the dry and mature skin from dehydration, ideal to use daily, alone or under makeup.
