#### Method

Combine phase A in a beaker, and blend well until the HA gel is dispersed. Combine phase B in another vessel and blend well until uniform. Add phase A to phase B, under constant agitation. Until smooth. Homogenize for a short time if necessary. Add phase C ingredients one by one, blending well after each ingredient. Adjust pH to 4.5-5. Viscosity can be increased by adding GelMaker EMU (mix well). This is a 'preservative free' product and should be packaged into a container free of contamination.

#### Properties

Serum that helps with the signs of too much sun. It soothes the skin, moisturizes, and replenishes with the help of tomato lycopene, that acts as a strong anti-oxidant and improves skin hydration, and regeneration. Pact with moisturizing hyaluronic acid, aloe vera, wheat protein and added anti-oxidants to care for the stressed skin.
