

Sunflower Lecithin Powder, USDA Certified Organic

Specification Sheet

Description: Sunflower Lecithin Powder is a naturally derived, beige, free-flowing ingredient produced from carefully dried sunflower and processed using a gentle cold-press method. Renowned in the cosmetic industry, lecithin functions as an effective stabilizing agent, enhancing formulation stability, texture, and overall product performance while supporting clean and modern formulations.

CAS: 8002-43-5

INCI Name: Organic Lecithin

Composition: Organic Lecithin

Appearance: Yellow gray to yellow brown free flowing powder

Benefits:

- Natural emulsifier and dispersing agent
- Excellent water binding ability (prevents moisture loss)
- Has good emollient, anti-sticking and refatting properties
- Controls viscosity

Use: Add to fat phase of formulas. Typical use level 0.5-5%. For external use only.

Applications: Lotions, creams, ointments, sun care products & after sun products, body butter, makeup products.

Solubility: Practically insoluble in water

Preservation: Preservative-free

Storage: Store in a sealed container, in a cool, dry, ventilated location. Keep away from extreme heat & incompatible materials.

Country of Origin: Netherlands

Raw material source: Sunflower seeds (*Helianthus annuus*)
