

Vitamin C (L-ascorbyl palmitate)

Specification Sheet

Description: Active form of vitamin C that is fat-soluble and more stable but somewhat less potent than L-ascorbic acid when incorporated into products. Purity >98%

CAS: 137-66-6

INCI Name: L-ascorbyl palmitate

Composition: L-ascorbyl palmitate

Appearance: White-yellowish powder, odorless

Benefits:

- Oil-soluble form of vitamin C
- Potent antioxidant. Can improve appearance of aged and fragile skin
- Widely used as add-on ingredient in skin-lightening products to correct hyperpigmentation and age spots
- Antioxidant effect can be increased by combining L-ascorbyl palmitate with L-ascorbic acid and/or vitamin E

Use: Add to hot fat phase or emulsifier phase of formulas; if it does not dissolve completely add vitamin C and some oil to a mortar and blend the mixture thoroughly with the pestle; suitable solvent: ethoxydiglycol; typical concentration 0.2-3 %. For external use only.

Applications: Lotions, creams, sun care & after sun products, shampoos, makeup products.

Solubility: Soluble in oil and alcohol, water-insoluble

Preservation: Preservative-free

Storage: Preserve in airtight containers, protected from light, between 46°F -59°F (8°C - 15°C). Keep the container closed when not in use.

Country of Origin: China

Raw material source: L-ascorbic acid and palmitic acid

10800 231st Way NE
