

## Natural Deodorant

(Sample Recipe for DeoConcentrate Personal Care)

### Natural Deodorant

Phase A	Weight %	For 100 g / 3.6 oz
Distilled Water (diluent)	88.7 %	88.7 g / 3.2 oz
Cucumber Extract (humectant, calming)	2 %	2 g / 0.07 oz
Sage Extract (humectant, anti-irritating)	2 %	2 g / 0.07 oz
PEG-7 Glyceryl Cocoate (humectant & emulsifier)	2 %	2 g / 0.07 oz
DeoConcentrate Personal Care (odor absorber)	5 %	5 g / 0.2 oz
Orange-Lemongrass Blend (anti-microbial agent and fragrance)	0.3 %	0.3 g / 0.01 oz / 7 drops

### Method

Combine phase A ingredients, one by one and stir well between ingredients.

Fill into roll-on deodorant bottles (3oz or 4oz) or use as a body spray using the 24-410 neck size Milano bottle or 24-410 neck size Carina bottle and the matching trigger pump.

For travel we suggest the 30ml/1oz Milano bottle or the 30ml/1oz PET amber bottle with the new black spray mist top.

### Properties

Gentle deodorant, with moisturizing and soothing herbs. DeoConcentrate Personal Care will only neutralize the odor and does not inhibit perspiration. When using in a deodorant roll-on bottle, we suggest adding 0.1-0.2 % xanthan gum. It will make the solution a little bit thicker, for better application.
