Method

Combine phase A in a heat-resistant beaker. Combine phase B separately, stirring well and allow Hydroxypropyl Guar to hydrate for 30 - 60 minutes. Test pH before adding Citric Acid and adjust to about 4.5 if necessary. Heat both beakers to 65C/150F. Add phase B to A with constant stirring. Stir over heat for a minute, and then remove from heat. Blend well until cooled, about 40C/104F, and then package.
