Use: Can be customized further by adding up to 5% (volume percentage) of additional liquid ingredients.

Adding Acids: A small amount of acids such as AHA fruit acids can make the lotion unstable and may separate. Please test pH and adjust acidity with TEA (triethanolamine) and test pH again. A good pH is in the range between 4.5 and 6.5. Being a natural cream base, slight separation during long standing or warm temperatures can occur. Can be reversed by blending.
