Procedure

Combine phase A in a beaker, and blend well until the HA gel is dispersed. Combine phase B in another vessel and blend well until uniform. Add phase A to phase B, under constant agitation. Until smooth. Homogenize for a short time if necessary. Add phase C ingredients one by one, blending well after each ingredient. Adjust pH to 4.5-5. Viscosity can be increased by adding GelMaker EMU (mix well). This is a 'preservative free' product and should be packaged into a container free of contamination.

Properties

Serum that helps with the signs of too much sun. It soothes the skin, moisturizes, and replenishes with the help of tomato lycopene, that acts as a strong anti-oxidant and improves skin hydration, and regeneration. Pact with moisturizing hyaluronic acid, aloe vera, wheat protein and added anti-oxidants to care for the stressed skin.
