#### Method

Give phase A into a disinfected glass beaker and sprinkle the hyaluronic acid into the distilled water while mixing at the same time with a little hand mixer to avoid the formation of lumps. Add phase B into another disinfected glass beaker and stir to blend the ingredients. Add phase B to phase A and stir very well until the gel is homogenous. Add the ingredients of C to phase A/B and stir well. The gel can be filled into treatment pumps, jars or into tubes. Viscosity can further be adjusted with GelMaker EMU, stir well.

#### Properties

Light gel that boosts collagen protection and has potent moisturizing properties due to hyaluronic acid and tripeptide-5. Skintight AP and Tripeptide-5 also firm the skin and strongly reduce wrinkles. Watermelon Extract protects the skin cells against daily stress induced by UV light and free radicals. A powerful treatment.
